

01 Target User Segments

Segment A · Independent Retail Crypto Traders

Why them?	They're the loudest segment in Web3. When a tool works for a retail trader, they post about it — Reddit threads, Twitter spaces, Discord screenshots. You get paid users and free marketing at the same time. No other segment does that.
Why now?	India just saw its second crypto surge post-2021 — retail trading volumes on CoinDCX, WazirX, and Binance India are climbing again despite regulatory grey zones. The govt's stance keeps shifting (30% tax, TDS, the 2023 PMLA inclusion of VDAs) which makes traders paranoid and reactive. They can't afford to be slow. Meanwhile global macro is moving fast — BTC ETFs, halving aftermath, altcoin rotation — Indian retail is watching all of it with no real edge.
Pain point AgentVault actually fixes	Retail traders drown in data — price feeds, news, on-chain metrics, whale alerts, Twitter sentiment — and no single tool connects all of it into one clear call. Most tools show you the data. AgentVault tells you what to do with it. That's the gap. A trader shouldn't need 6 tabs open at 2am to decide whether to hold or exit.
Where to find them	Reddit: r/IndianStreetBets, r/CryptoCurrencyIndia, r/CryptoCurrency — Twitter/X: #CryptoTwitter, hashtags like #BTC #Altcoins #CryptoIndia — Discord: WazirX community, Uniswap, pump.fun servers — Telegram: every major trading signal group — YouTube comments of Indian crypto channels (Crypto Dost, Coin Crunch India)
Activation hook	"Slide into their Discord, say we'll do a live AI trade breakdown on the coins their community is holding — on the spot, no prep from them. We pick 3 coins live, AgentVault analyses them, they watch it work in real time. Zero signup needed to see value. At the end we give everyone in the server an invite link."

Objection → "AI trading tools have been scams before. How is this different?"

Most "AI" tools just repackage RSI with a chatbot on top. AgentVault combines on-chain data, order flow, and sentiment in real time — and shows its reasoning, not just a buy/sell signal. We're not asking you to trust us blindly. We'll do a live breakdown in your community right now. If it's trash, call it out publicly. We'll take that risk because we know what it can do.

Segment B · University Blockchain Club Members & Student Investors

Why them?	One email to a club president = 20–80 users in one shot. Students are product-obsessed early adopters who actually give feedback, post about tools on LinkedIn, and stay loyal if you treat them right. They also become the BD people and founders of tomorrow — getting in early has long-term upside.
Why now?	IITs, IIMs, and central universities are launching blockchain electives and crypto investment clubs. The Nasscom + MeitY push on Web3 skilling is creating a wave of student interest across India right now. There's no tool built for them — everyone's targeting professionals. That's a wide open door.
Pain point AgentVault actually fixes	Students run paper portfolios or invest tiny amounts but have zero institutional-grade research. They're using free TradingView and Twitter for alpha — which means they're getting the same information as everyone else, just later. AgentVault gives them on-chain intelligence that used to only be available to hedge funds. That framing alone is a hook.
Where to find them	LinkedIn: search 'Blockchain Club' + university name → message the president directly — Discord: ETH India, college Web3 community servers — Instagram: college blockchain club pages — Offline: IIT Bombay, Delhi, Madras have active blockchain cells with regular events
Activation hook	"We'll come into your Discord and run a live AI trade breakdown for your whole community — on the coins you're watching. No signup required upfront. Everyone who attends gets an early access invite link at the end."

Objection → "We don't have budget for paid tools."

There's no budget conversation here. Beta is free, and we're not even asking you to sign up before you see it work. We do a live session in your server, your members watch it, and they decide for themselves. If it's useful, they join. If not, you've lost nothing except 30 minutes. We're the ones taking the risk by showing up live.

02 Outreach Messages — Segment A (Retail Traders)

Cold DM — Twitter/X or Discord

Hey [Name] ☐

Saw your take on [specific coin/post] — that was a solid read, especially the part about [something specific they said].

I'm working with AgentVault, an AI trading assistant that tracks on-chain data, whale movements, and sentiment all in one place — and gives you the actual reasoning behind every call, not just a buy/sell arrow.

We're doing free live AI trade breakdowns in communities right now — we come into your Discord/group, pick 3 coins the community is watching, and analyse them live with the tool. No prep needed from your side.

Would that be something your community would find useful? Happy to set it up this week.

— Jonathan, AgentVault

Follow-up — 4–5 days after no reply

Hey [Name] — just circling back on this ☐

We did a live breakdown session in [other community name] last week — here's what it looked like: [screenshot/loom link]. Caught a setup on [coin] before it moved 28%.

Still happy to do one in your community if timing works. 30 minutes, free, and your members get early access at the end.

No worries if not — just thought you'd want to see what it looks like before deciding.

— Jonathan

03 GTM Experiments

☐ Experiment 1 — Live Discord Raids — "We Come To You"

Most tools make you sign up before they show you anything. We flip it — we come into their community and demo the product live with their actual coins. That's the hook.

Steps	Find 10 active trading Discord servers (WazirX, CoinDCX community, r/IndianStreetBets' Discord, Pump.fun, etc.) → DM the mod or admin with the offer → Set a date → Show up, pick 3 coins from their chat, run AgentVault live → Drop invite link at the end of the session
Why it's creative	Nobody is doing live product demos inside crypto communities. Mods love content that keeps their server active. One session = 20–80 potential signups who saw the product work in real time, on coins they care about.
Metrics	Sessions done / invites claimed / users who sign up within 48 hrs of session
Cost	₹0 — just time. Aim: 10 sessions in 2 weeks = ~40–80 signups

☐ Experiment 2 — "AlphaVault" Weekly Thread — Public AI Picks with Receipts

Every Monday, post a thread on Twitter/X and Reddit: "AgentVault's AI flagged 3 coins this week before they moved. Here's the on-chain data it used." Show the reasoning, show the result. Make it public, make it verifiable.

Steps	Post thread Monday → invite followers to reply with their own calls for the week → Friday: reveal whose call was closest → winner gets a shoutout + private early access invite → attach a Typeform: "Get the AI's weekly pick dropped in your inbox"
Why it's creative	Crypto Twitter runs on receipts and public bets. A transparent AI with verifiable picks is inherently shareable — people will repost to either agree or argue, both drive reach. The weekly format builds a habit loop.
Metrics	Thread impressions / email list signups / reply engagement rate / retweets
Cost	₹0. 1–2 hrs of content work per week. Use real AgentVault signals — authenticity is the whole point.

□ Experiment 3 — "Degen vs. AI" Campus Challenge — IIT/NIT Blockchain Clubs

Run a 2-week crypto trading competition inside 5 university blockchain clubs. Two teams: one uses AgentVault, one trades on gut + Twitter. Whoever performs better wins. Track it publicly.

Steps	Email 10 blockchain club presidents (IIT Bombay, IIT Delhi, IIT Madras, BITS, Manipal) → pitch a free 2-week "Degen vs. AI" paper trading competition → give the AI team AgentVault access → post weekly updates on the club's Instagram/Discord → winner gets a certificate + a feature in AgentVault's newsletter
Why it's creative	It's a competition — students will involve their whole club, post about it, argue about it. It generates UGC, it shows the product working vs. human intuition, and every participant becomes a real user who's invested in the outcome.
Metrics	Clubs onboarded / participants per club / posts/stories generated / conversions to full signups post-competition
Cost	₹0 direct spend. Optional: ₹500–1000 for winner goodies (AgentVault merch or Amazon voucher).

04 Bonus — 15 Real Leads with Links

Retail Traders — India & Crypto Twitter

Name / Handle	Platform / Link	Why Target Them
Crypto Dost (Hindi YT)	youtube.com/@CryptoDost	900k+ subs, Hindi-speaking retail audience, reviews tools regularly
Coin Crunch India	youtube.com/@CoinCrunchIndia	Active Indian crypto channel, trusted by retail investors
@CryptoWendy0	x.com/CryptoWendyO	200k+ followers, vocal about trading tools and AI signals
@AltcoinPsycho	x.com/AltcoinPsycho	Large retail altcoin audience, discusses automation often

@Pentosh1	x.com/Pentosh1	Technical analyst, large following, open to new tools
@inversebrah	x.com/inversebrah	Degen trader, high engagement, viral potential for challenge campaigns
r/IndianStreetBets mod	reddit.com/r/IndianStreetBets	Active sub, 80k+ members, mods open to community collabs
WazirX Community Discord	discord.gg/wazirx (approx)	Official community, 10k+ active traders, mod access possible

University Blockchain Clubs — India

Club / University	Where to Reach
IIT Bombay Blockchain Club	linkedin.com/company/iitb-blockchain — active LinkedIn presence, DM president directly
IIT Delhi Web3 Cell	linkedin.com — search 'Web3 IIT Delhi', active Discord
IIT Madras Blockchain Club	LinkedIn + college events page, hosts regular crypto events
BITS Pilani Fintech Club	linkedin.com — search 'BITS Fintech', open to BD collabs
Manipal Blockchain Society	Instagram + LinkedIn — very active on social, 1k+ club members
NIT Trichy Tech Club (Web3 vertical)	LinkedIn — growing Web3 wing, easy to get a meeting
VIT Vellore Blockchain Club	LinkedIn + Instagram — 1500+ members, hosts hackathons

The play in one line: Don't wait for users to find AgentVault — take the product to where they already are, show it working live, and let them sell it to each other.

3 experiments · 2 segments · 15 warm leads · ₹0–₹1,000 total spend · 50 users in 3 weeks
